

Cookie Policy

This page explains the current use of cookies and similar technologies on the ViaMax Solutions Ltd website.

Current position

The website does not intentionally use optional analytics, advertising or tracking cookies in its current source configuration. The source-code audit also found no localStorage, sessionStorage, first-party cookie code, analytics tags or advertising pixels.

Because no non-essential cookies or similar technologies are currently in use, the website does not display a cookie consent banner or consent management platform.

Necessary technical information

The website is delivered through hosting infrastructure. The hosting or network provider may process technical request information, such as information needed to deliver, secure and troubleshoot the website. This may include request timing, IP address, browser or device information, requested resource and response status.

Contact enquiries

The contact form prepares an email in your email application. Your email application and the email services involved may use their own settings or technologies. The website does not store the form contents in a website database.

External media

Testimonial videos and external players are disabled in the current configuration. If an external player or other third-party technology is enabled later, its privacy and consent implications will be reviewed before activation.

Changes

This page will be updated if the website begins using optional cookies, analytics, advertising, external media or other similar technologies. Questions about the current position can be sent to contact@viamaxgroup.com.
